1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patent ability shall not be negative by the manner in which the invention was made.

2. Claims 1-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Russell (wo-94/23957) in view of Hauser^e (3,315,387)

Russell relates to an assemblage of laminates. Each laminate comprising a graphic section with pressure sensitive along a rear surface thereof. Each laminate includes a cover sheet removeably adhered to the graphic section (abstract). For alignment purpose each laminate has a perforated or cut edge. However, Russell fails to teach that the alignment edge is irregular and usually distinctive. Hauser^e discloses adhesive labels with alignment means in the shape of mating edges (9, 10) that extends past the peripheral edge of the cover sheet. Hauser's alignment mating edges provides for edge-to-edge engagement. Therefore, it would have been obvious to one having ordinary skill in the art to utilize Hauser's teaching of providing irregular mating edges in the invention of Russell.

The size of the mating edge of at least 0.05 inch would have been obvious based on optimization through routine experimentation.

The intended use phrases such, as "adapted to", etc, have not been given patentable weight because said phrases are not deemed to be positive limitations.
